

AC Power Modules

With or Without Surge Suppression

MG-AC-POWER-A
MG-AC-POWER-S-A

Overview

Telect's Media Gateway accommodates two different AC power modules – choose from solutions with or without integrated surge suppression. The transient voltage surge suppression unit features audible alarms and LEDs to indicate status, while the non-surge unit is more cost-effective but does not offer protection for electronics. The non-surge unit is ideal for users who already have a UPS with surge suppression installed in their application.

Primary Benefits

- Surge unit provides protection for active electronics installed in the Telect Media Gateway panel
- Conveniently locates power inside the Telect Media Gateway panel
- Provides four standard AC power outlets
- Audible alarms and LED status (surge model only) clearly indicate performance

Features

- Up to 15A per two outlets, providing sufficient capacity for most applications
- Separate power box from faceplate allows the AC power to be roughed in during the installation phase, with faceplate installation at trim-out
- Four cable knockouts on the power box for service connections
- Manufactured to high performance standards, providing excellent performance equal to all competitive standards
- Fits standard mounting spaces for all Telect Media Gateway enclosures
