

Module Carrier

Four-Module Capacity, Hinged

MG-CARRIER-4-A

Overview

The heart of every Telect Media Gateway system is the Module Carrier. This unit holds up to four modules of any type, and a hinged design allows rear access to the terminations for troubleshooting without disruption of service.

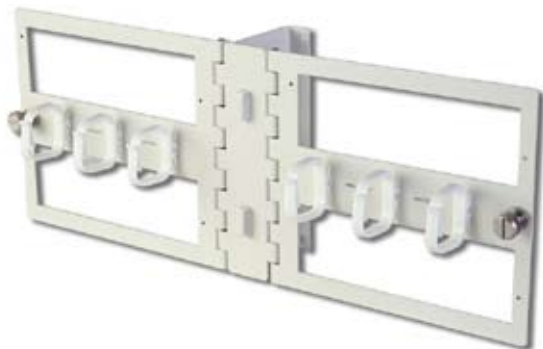

The Module Carrier also creates the separation of termination from cross connect, allowing the installer to terminate and test all the cabling in the house. When finished, the installer can close up the carriers and eliminate any confusion for the end user. The end user simply cross-connects the service on the front of each module to the color and number that corresponds to the outlet location where they want to deliver service.

Primary Benefits

- Fits in all Media Gateway Chassis (31", 20"; surface-mount or flush-mount)
- Holds four Telect Media Gateway modules in compact space
- Features built-in cable management

Features

- Installed after the rough-in phase of installation
- Holds up to four modules of any type
- Supports surface mounted and flush mounted installations
- Built-in cable management for both horizontal and vertical cable patching
- Allows access to rear terminations for maintenance and troubleshooting without affecting services
- Simplifies end user experience by separating terminations in the rear from the cross-connect functionality in the front
- Can be used to create an internal demarcation point for service providers
- Standard mounting spaces for all Telect Media Gateway enclosures
- Abundant lances to accommodate standard Velcro tie straps for cable management
