

# Slotted Cover for 31in Chassis

## Hinged Design, Optional Lock

MG-HGCVR-31-S-A

### Overview

For a flexible, functional and cost-effective solution for ventilation and protection with a 31" Telect Media Gateway structured cabling panel, choose this slotted cover.

The slots on the upper and lower portion of the cover create a simple airflow by allowing warm air to rise upward and out of the panel, thereby creating a vacuum that pulls the cool air in from the bottom. The cover can be utilized in either right-hand or left-hand installation (illustrated in specification drawings).

The slotted cover completes an aesthetically pleasing look with a beveled and tapered edge that creates a smooth finish line with the wall surface.

### Primary Benefits

- Ventilation slots keep electronics cool
- Mounts to MG-CHASSIS-31-A with standard screw-type fasteners
- Compatible with flush-mount or surface-mount installations
- Creates a clean finished look that allows the panel to be installed anywhere

### Features

- Flanged cover hides rough edges of drywall openings in recessed mounted installations
- Supports surface mounted and recessed mounted installations
- UL listed
- Drywall thickness indicator must be used to ensure proper fit for the cover
- Optional lock assembly for secure installations
- Door can open left or right based on location
