

### Overview

The central distribution point for a structured cabling system, this chassis mounts on any surface and is designed specifically for backboard installations, whether in the mechanical room of a home or a telephone closet in an MDU. The surface-mount chassis is perfect for smaller installations to minimize up-front costs, yet it can also handle larger applications.

Just like traditional backboard installations, this chassis is designed to accept cable coming from behind the backboard. Paired with the associated ring panel the only limit to the amount of cable you can terminate is how much space you have behind and on your backboard.

### Primary Benefits

- Mounts on any flat surface with space behind it to run the cables
- Virtually unlimited termination capacity
- Standard chassis holds one hinged carrier for a total of four modules (32 CAT5/6 terminations)
- All Telect Media Gateway modules are compatible

### Features

- Supports surface-mounted installations
- Low up-front costs for smaller applications
- Multiple oversized cable entry holes provide ample access
- UL listed
- Rear cable entry holes for surface-mount installations
- Uses all standard hinged carriers and Telect Media Gateway modules
- Standard mounting spaces for all Telect Media Gateway enclosures
- Abundant lances to accommodate standard Velcro tie straps for cable management
